Impact of myopia

2020 Myopia affects almost

30% of the world's population

2050

Myopia is estimated to affect

High myopia will affect

10% of the world's population

Myopia -0.50 D or worse High myopia -5.00 D or worse

Risk of vision impairment

Uncorrected myopia is a leading cause of avoidable vision impairment. Complications associated with high myopia can be sight threatening e.g. myopic macular degeneration.

In children, poor vision or uncorrected vision can impact scholastic performance and result in psychosocial stress. Negative attitudes to spectacle wear may also affect psychosocial well-being.

Quality of Life (QOL)

Reduced QOL has been demonstrated for myopia and myopiarelated complications. QOL is impacted whether myopia is corrected or uncorrected and varies according to the type of corrective modality worn.

Given the progressive nature of myopia, direct costs (expenditure on diagnosis, correction/management, transport and treatment of morbidity) and lost productivity costs are substantial.

Risk factors

Higher levels of education and near work

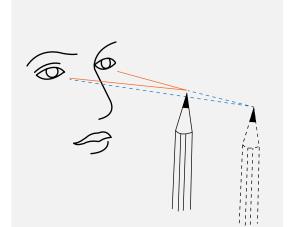

Less time outdoors

- East Asian ethnicity
- Parents with myopia
- · Girls more susceptible according to some studies

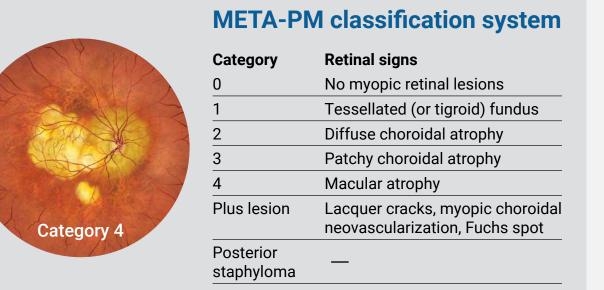

Spectacle options

Binocular vision

- Link with myopia development is unclear
- Important to optimize binocular vision in children to provide a single clear image

Pathologic myopia

of the world's population is affected by pathologic myopia

1-3%

1% Europeans

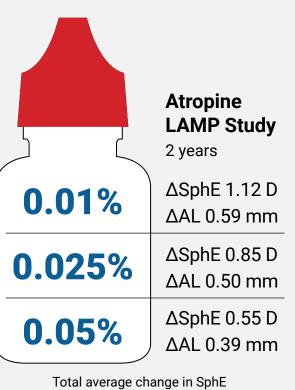

Increases in prevalence and severity 40+ years

Management options - Reported treatment effectiveness varies with age of initiation, treatment duration as well as demographic/environmental factors.*

Prevention

Slowing progression - Spectacle and contact lens treatments typically impose myopic defocus on a local retinal region

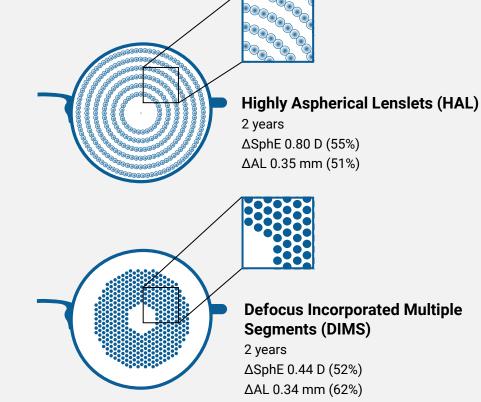

80 to 120 minutes outdoors daily

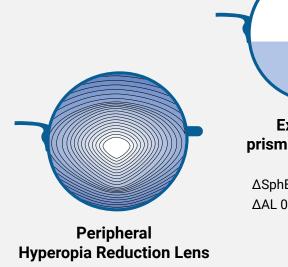

and AL over two years.

Authors: Monica Jong, James Wolffsohn, Christine Wildsoet, Jost Jonas, Ian Morgan, Nicola Logan, Kyoko Ohno-Matsui, Padmaja Sankaridurg, Serge Resnikoff.
